多不工多之数是值函数积分的概念与性质

Note Title

(一)二星融分的造义。

例上:求曲了及中心体心体积

③求志· $V \approx \sum_{i=1}^{n} \sum_{j=1}^{m} f(\vec{s}_i, \vec{t}_j) \Delta x_i \Delta y_j$

Note 1:若f在有行形的以D上=重新分布在

(二)三克配分的这次:

设ρ(x,y,z)的有于闭电线Ω上有运动。 ρ(x,y,z)作密度、求Ω的质量。

(三) 可和的保备=

$$\int_{0}^{2} f(x,y) dxdy = \int_{0}^{2} f(x,y) dxdy + \int_{0}^{2} f(x,y) dxdy$$

1241:
$$2+\frac{1}{3}$$
: $I = \iint \sqrt{\alpha^2 - \chi^2 - y^2} \, dxdy$ (a>0)

(四) 二重配分达异性质:

1. 线特性度: f. f. f. 在杰号闭城 D上可知. ∀o. B ∈ R 知 ×f+βまなのとか可称. 血

Societies + pg(x,y) dxdy = x Sf(x,y) dady + p S f(x,y) dxdy

2. 奇倍啊: Case1: D关了2 翻对锅. fix.y) 关于生态的路. 知

$$\int_{0}^{\infty} f(x,y) \, dxdy = 0$$

$$\int_{0}^{\infty} f(x,y) \, dxdy = \int_{0}^{\infty} f(x,y) \, dxdy + \int_{0}^{\infty} f(x,y) \, dxdy$$

$$\int_{0}^{\infty} \int_{0}^{\infty} \int_{0}^{\infty} \int_{0}^{\infty} f(x,y) \, dxdy + \int_{0}^{\infty} \int_{0}^{\infty} \int_{0}^{\infty} f(x,y) \, dxdy$$

$$= \lim_{\lambda_{1}(1) \to 0} \int_{0}^{\infty} \int_{0}^{\infty} f(x,y) \, dxdy + \lim_{\lambda_{2}(1) \to 0} \int_{0}^{\infty} \int_{0}^{\infty} f(x,y) \, dxdy$$

$$= \lim_{\lambda_{1}(1) \to 0} \int_{0}^{\infty} \int_{0}^{\infty} \int_{0}^{\infty} f(x,y) \, dxdy + \lim_{\lambda_{2}(1) \to 0} \int_{0}^{\infty} \int_{0}^{\infty} f(x,y) \, dxdy$$

$$= \lim_{\lambda_{1}(1) \to 0} \int_{0}^{\infty} \int_{0}^{\infty} \int_{0}^{\infty} f(x,y) \, dxdy + \lim_{\lambda_{2}(1) \to 0} \int_{0}^{\infty} \int_{0}^{\infty} f(x,y) \, dxdy$$

$$= \lim_{\lambda_{1}(1) \to 0} \int_{0}^{\infty} \int$$

Case 2: D关于 x 其中对于 fixin 关于 y 是 得电路 M Sfdxdy = 2 Sfdxdy

- 3. 付随之祖: f(x,5) 在備音闹HX ひと可称, U V(x,5) ED. $m \le f(x,y) \le M$. $(x,y) \le M \circ (x,y) \le M \circ (x,y) \le M \circ (x,y)$
- 4. 绝对可称性: f(x,y)在有音例中的力之追读. 21/1f|在力包可称 A. | If fixing dady | \leftit{\infty} | fixing dady
- 5. 积分中位之20g: f(x,y) 在有导闭电域の上追读、则目(5.7)∈D. s.t $f(\xi, \eta) = \frac{\int f(x,y) dxdy}{\int \int f(x,y) dxdy} = f(\xi, \eta) \sigma(\eta)$

例1: f(x,y) 在有异丽的 D 地名, 道侯 不怕的屋 则 $\iint f(x,y) dxdy > 0.$

泥啊: 中方 fをかと外名不怕为屋、ヨ(なる)をり、f(なら)>0 め近はね (x・り) = f(x・り) > $\frac{f(x・b)}{2}$.

(x, y) = (x, y) √(x-x) + (y-y)2 < 6} = 05 + (x, y) > 1/2 = $\iint_{\mathcal{D}} f(x,y) \, dxdy = \iint_{\mathcal{D}} f(x,y) \, dxdy + \iint_{\mathcal{D}} f(x,y) \, dxdy \geqslant \iint_{\mathcal{D}} f(x,y) \, dxdy \geqslant \frac{f(x,y)}{2} \cdot \pi \delta^2 > 0$
